xAI Hiring Team
Re: AI Tutor - Hindi

Dear Hiring Team,

I'm applying for the AI Tutor - Hindi role. I'm a native Hindi speaker with fluent, professional-level English, and I've spent 7+ years in a role built entirely around clear voice and written communication - talking end users through technical problems over phone, chat and email, often working from incomplete or noisy information to reach an accurate result.

That work also built habits I think map directly onto this role: precise documentation (my knowledge-base articles were relied on by other engineers, so accuracy mattered every time), fast adoption of new proprietary tools, and comfort working independently against a clear quality bar with minimal supervision. I don't have prior audio-annotation or linguistics experience, but I pick up structured tooling quickly and take real care with accuracy-critical work.

I have a reliable home setup and internet connection, am comfortable providing voice recordings and receiving feedback on them, and can commit [X] hours a week on a flexible schedule.

I'd welcome the chance to contribute to Grok's multilingual voice training and would be glad to complete any assessment as part of the process.

Sincerely,
Tanmoy Sarkar
